

[Local news application]

[Setup & Run Instruction]

Set up project

This application runs in Nodejs environment, the only external software you need to install into your PC is Node.js. Follow this link & install the right version to your machine:

<https://nodejs.org/en/download/>

After installation complete, check if everything is set up by open command line, type and run this code: "node -v" and it should show the version of the Node.js. Else, close all your command line windows and try again.

Note: project is powered by Node.js, which is a Javascript environment hence no compiling needed.

Run project

Navigate to root directory of project, open command line there and run this code: "node start". It should echo the following line in the command line: "server is running on port 3000".

Finally, open your browser and access this url: <http://localhost:3000/>
